EMPOWERING

GREEN MOBILITY

Sustainable driving fun for you and the environment

tretty
green mobility

Ineffective mass transit leads cities to gridlock

CO2 emissions
Motorized private transport accounts for a significant share of CO2 emissions.

Delays
3 days and 17 hours in traffic jams per year

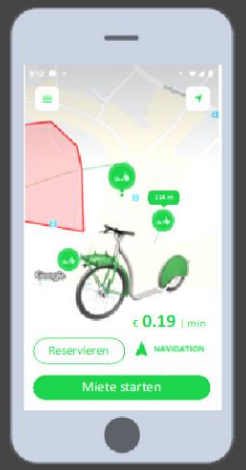
Traffic congestion
550,000 car trips per day on Münster's roads.

Stress and bad mood
Every second driver feels stressed in traffic.

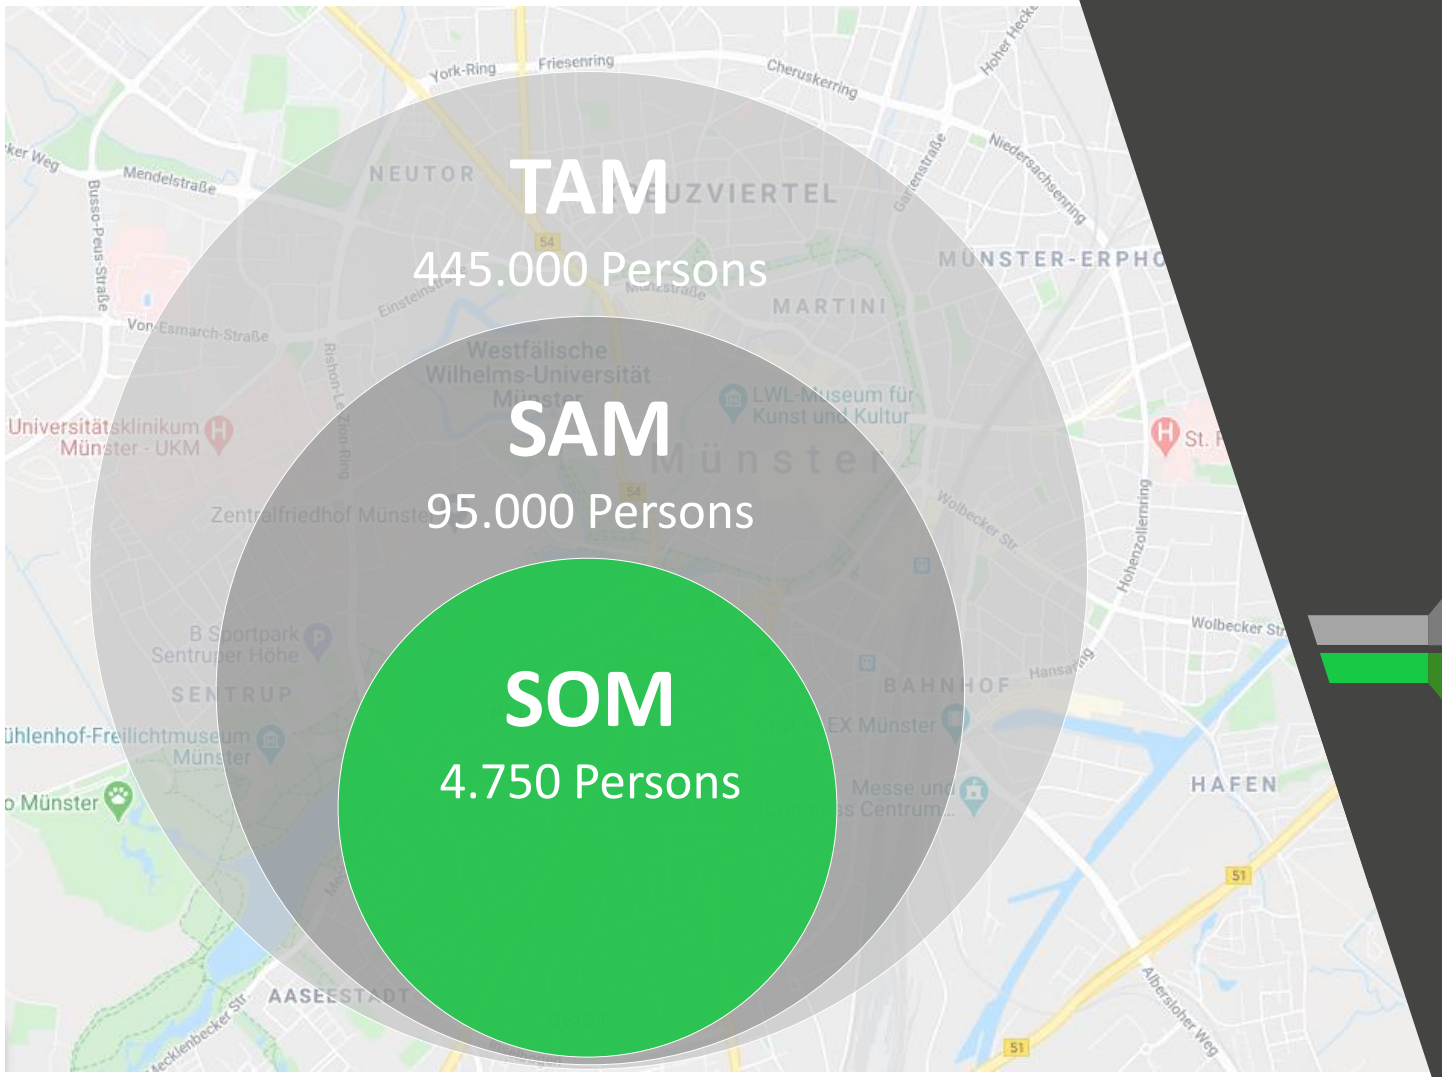
Lack of space
crowded streets and nerve-racking search for a parking space.

Lack of exercise
An office worker sits an average of 7.5 hours per day.

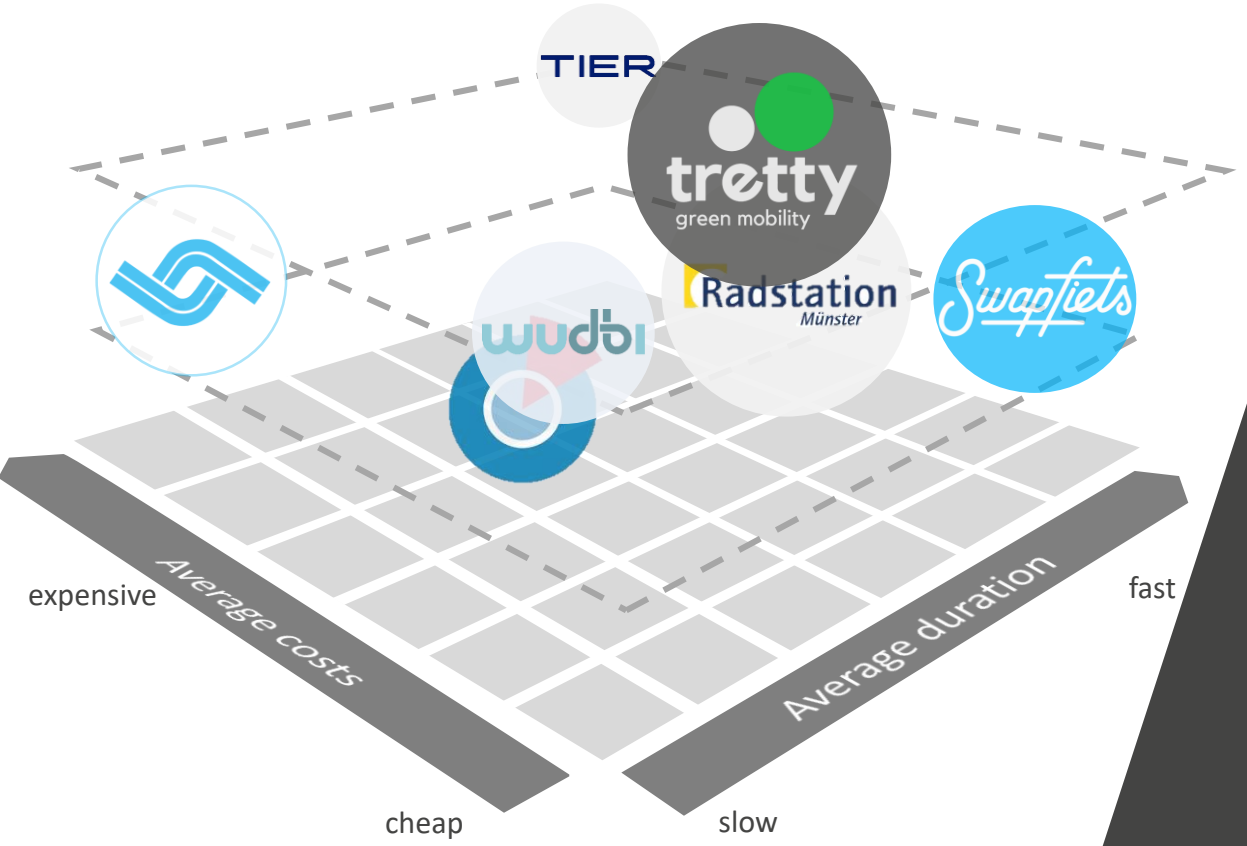
Shared Mobility rethought - sustainability meets innovation



Strongly growing market with untapped potential



tretty stands with advantages over the competition



Size of bubble = sustainability

Hight of bubble = flexibility

faster than walking

more relaxed than by public transport

more environmentally friendly than by car

space-saving, keeping fit

reduces traffic jams and CO2 emissions
